

Amendments to the Claims

This listing of claims replaces prior versions:

Claim 1 (currently amended): A processor connected via a network system to an operation terminal unit in which inputs are made through a Web browser and having at least a Web server division, a CGI script control division and a processing program division having a processing program, said processor having;

a display control file describing therein display control information for a Web page that is displayed on said operation terminal unit, wherein

said CGI script division analyzes the description of said display control file which is designated by said Web browser, executes for processing said processing program following said description of said display control file and outputs display control information in said display control file to said Web browser based on the result of said processing.

Claim 2 (original): A processor as set forth in Claim 1, wherein, in said display control file, said display control information is described separately in a file control division and an HTML division.

Claim 3 (original): A processor as set forth in Claim 1, wherein said CGI script control division reads said display control information for each line and executes an analyzing process.

Claim 4 (currently amended): A process as set forth in Claim 2, wherein said CGI script control division embeds in an HTML output dynamic information related to the display of said Web page following the description in said HTML division and outputs the HTML output to said Web server division.
